

ScanStation

Real-time incubator and colony counter

The real-time revolution!

interscience

interscience

- Over 40 years of microbiology expertise
- World leader in automatic colony counters
- Made in France in our R&D center & manufacturing plant

SCIENTIFIC
EQUIPMENT
MANUFACTURER

MADE IN FRANCE

ScanStation® is a real-time incubator and colony counting station centralizing **incubation, detection** and **counting of up to 300 Petri dishes** simultaneously. Petri dishes are counted every 30 min* throughout the process. **Colonies are detected as soon as they appear.** E.g. below: *Coliforms* on VRBL agar incubated at 37 °C

Discover bacterial growth hour by hour and see the video during and after incubation. Data are archived and available throughout incubation up to final validation of the results in the following formats: **LIMS, mp4, pdf, jpeg, png, bmp and csv.**

PATENTS PENDING

Real-time bac

Rotating Petri carousel

Record-breaking capacity
of 300 Petri dishes

Insulated panoramic window

Easy process monitoring

Thermoregulated incubator

Peltier module $\pm 1\text{ }^{\circ}\text{C}$
refrigerated incubator
No compressor

Storage unit

For computer, UPS, accessories

Easy installation

Simply plug in the 100-240V~
power cord.

terial monitoring

High speed robotic arm

Automated plate handling
from incubation to counting

Real-time bacterial growth

Touch screen with real-time video
of the process
24/7 operation

Ultra-HD camera

Reflection free LED lighting
5 megapixel sensor

Pressure-sensitive gripper

Automatically adapts to right-side up
or upside down Petri dishes
No settings

Bar-code reading

Automatically retrieves sample data
Connectable with LIMS, dataLink™

Key features

Mono or multi-batch

The loading of Petri dishes can be done at the beginning or during the incubation, with different light or incubation duration settings.

For example, you can load 70 contact plates on day 1 for 5 days of incubation. On day 2, add 20 ø 90 mm Petri dishes for 2 days of incubation, and have several batches running together with different settings.

Data integrity

ScanStation® is a breakthrough in data integrity: images and video of the bacterial growth are saved, from the start to the end of the incubation. You can recover the data beyond the incubation date.

The bacterial growth video helps validate the results by showing the distinction between a particle and a bacterium, avoiding false positives. Images taken at regular intervals make it possible to visualize the beginning of the growth of micro-organisms such as molds in order to facilitate counting.

ScanStation® software complies with FDA 21 CFR Part 11 guidelines. It allows electronic signatures, audit trails and encrypted data for security reasons. You can assign different to users rights depending on the access levels.

dataLink™

The integrated bar-code reader can read most of 1D/2D barcodes on the market, including QR codes and datamatrix. For the pharma industry, prelabelled Petri dish from bioMérieux™, Merck Millipore™ and BD™ can be read to integrate the data from the sample, to gain productivity and security, when connected with a LIMS.

When used in combination with a Spiral® plater, interscience's dataLink™ system can also be used to transfer data from plating to ScanStation®. It avoids double data entry, which is source of error and time loss.

Pharmaceutical

Anticipated results and data integrity

ScanStation® is used in pharmaceutical labs. It allows bacterial detection during incubation..

Protocol: Tests have been carried out in pharmaceutical laboratories in order to work on the early detection of the 5 germs of the pharmacopoeia. Different samples are compared to identify a "Time to result".

0 h
0 CFU

25 h
16 CFU

90 h
16 CFU

Time to result of 11 samples of *Aspergillus Brasiliensis*

- Average detection in 40 hours.
- 85% of the countings make a stable and reliable CFU result at 65 hours instead of 7 days.

0 h
0 CFU

14 h
10 CFU

70 h
10 CFU

Time to result of 19 samples of *Escherichia Coli* on contact plates

- Average detection in 16 h.
- 85 % of the countings make a stable and reliable CFU result at 25 hours instead of 5 to 7 days.

Application: Environmental monitoring of clean rooms, air and surface

- Anticipated results
- Data integrity by saving images of Petri dishes

Cosmetics

Particles removed

ScanStation® is popular in cosmetics because it allows the removal of particles and matrix effects. Reading is therefore facilitated by the T0 image and real-time monitoring using photos taken at regular intervals isolating bacterial kinetics.

Protocol: Tests were conducted in cosmetic laboratories to evaluate the performance of the ScanStation®. A method comparison was performed on the 5 reference strains and according to the cosmetic reference system.

Reading comparison of *Escherichia Coli* between the manual method and the ScanStation®

The reading interpretation of *Escherichia Coli* demonstrates that 96.3% of the results are within a 0.3 log difference.

Application:

Analysis of all cosmetic matrices

Challenge tests in R&D

Raw material quality control and finished product

- Anticipated results
- No significant difference between manual reading and reading with the ScanStation®
- Discriminate particles and colonies, and results closer to the true count (verified by growth video)

Food

Automation and better production management

ScanStation® is appreciated in food laboratories. During incubation, the ScanStation® takes regular images of the Petri dish to isolate bacterial kinetics.

Protocol: Analyses were carried out in food laboratories specialized in dairy products. A method correlation was performed for this study.

ScanStation® counting on Spiral® plating

Manual/ScanStation® counting correlation graph

Application:

Manual method or Spiral® method
Quality indicators of all food samples
PCA, MRS, VRBL, TBX agar

- Anticipated results
- No significant difference between manual reading and reading with the ScanStation®
- Productivity by automation of colony counting

Environment

Anticipated results

ScanStation® is popular for environmental analysis. During incubation, the ScanStation® takes regular images of the Petri dish to isolate bacterial kinetics. The associated video allows early detection and facilitates endpoint validation.

Protocol: A performance study was carried out on different filtration membranes (multiple brands and colors).

ScanStation® counting on polycarbonate filtration membrane

Count of 7 bacterial strains on white membrane without grid

Application:

Environment water
Drinking water

- Anticipated results
- No significant difference between manual reading and reading with the ScanStation®

Technical specifications

	ScanStation® 100	ScanStation® 200	ScanStation® 300
Reference	439 100	439 200	439 300
Capacity	100 Petri dishes	200 Petri dishes	300 Petri dishes
Reading time in between each dish	30 minutes or 1 hour		1 hour
Petri dish size	Ø 55-65 mm and Ø 90 mm, right side up or upside down		
Type of plating accepted	Pour plate, surface, Spiral®, filtration membrane		
Loading	Single or multi-batch		
Camera resolution	5 megapixels		
Interface	23 inch touch screen		
Software	ScanStation® software		
Languages	English, French, German, Spanish, Chinese, Japanese		
Data export	mp4 video, pdf, jpeg, png, bmp, csv et xls		
Video player	Play, zoom, pause, replay, during and after incubation		
Included computer system	PC Windows 10 desktop with Intel i7 processor		
Incubation temperature	From 20 °C to 45 °C		
Accuracy of incubation temperature	± 1 °C in 9 points of the incubator		
Recording of the temperature	Every minute		
Heating and cooling technology	Peltier modules, compressor free		
External temperature	From 18°C to 25°C		
Max external humidity temperature	70 %		
Max incubation time	10 days		
LED internal light	✓		
Electronic locking door	✓		
Pressure sensitive gripper	✓		
Extra rigid mass aluminum platform	✓		
1 year warranty	✓		
External dimensions (w x d x h)	136 x 83 x 91 cm	136 x 83 x 122 cm	136 x 83 x 146 cm
External dimensions (handles dismantled - w x d x h)	136 x 79 x 91 cm	136 x 79 x 122 cm	136 x 79 x 146 cm
Height of the storage unit	62 cm		
Total height with storage unit	146 cm	177 cm	201 cm
Weight of the ScanStation®	277 kg	320 kg	355 kg
Weight of the storage furniture	70 kg		
Power	100-240V~ 50-60 Hz		
Max power	2000 watts		

Demos and training welcome: please contact us!

Delivered with: 1 computer with pre-installed ScanStation® software, 1 touch-screen monitor, 1 wireless keyboard, 1 wireless mouse, user's manual, 1 maintenance kit.
